1. Find the square footage on the chart that is closest to the room in which air is to be delivered by the fan.
2. Select your airflow setting based on the chart. For older homes, consider a setting that results in a higher ACH.
3. Areas marked w/ : fan is oversized for this area at this speed setting. Lower speed setting or consider TW208 or TW408 instead.
4. Areas marked w/ : low speed may not deliver enough air for this area, particularly older homes with inadequate insulation. Use high speed.
